Building Thinking Routines for our projects?

1. Pick the area ie Identify the Need(problem area, people, customer)
2. List all the major areas of that
3. Create a set of Questions
4. Using these two items pick three heading that will steer your process.

Picking our problem

Explain, Define, Describe the problem

Doing our Research

Know, Not sure of, Evidence.

identify the need or problem • Identify/ recognize • Claims and evidence • Illustrate/ explain • Creative thinking • Classify/ categorize	What do we notice about the problem that can give us clues on a way to design a solution? How would we describe the need (of the character) in the story? How do we think we can describe the problem to be solved? Can we break the problem/need design into parts?
Research the need or problem • Classification • Sequencing • Comprehension • Analysis • Evaluation	What do we think we know? What are we not sure about? What do you think we should ask questions about? What evidence do we have to support that is true? How do we could check for evidence to support that as true or as a “fact”?

Lets do Picking the Requirement Items

The Requirements are the parameter well will judge have we met our outcomes.

Research the need for Requirements: • Measurement • Outcomes • Standards • Judgement against each other • Must or want	Questions: How will we judge out outcome? Does it make sense for our problem to follow this? Can this be defined as a standard for the outcome? How can we use these to make a good decision for our results?

Judgement, Planning, Results

Build thinking Routines that Apply to the following:

Knowing myself----- Ice Breaker ---- Learning buddies
Building our Youth Community
Self-manage our Inquiry process
Develop our outside partners
What issues to we want to work on?
Research & Requirements
Problem Solving
Evaluating & Discussion
Reporting

Build a Thinking Routine for each
